ENTITY RELATIONSHIP DIAGRAMS:

DOMAIN CLASS DIAGRAM:

Data Dictionary:

Table : Student

Scope : Data about the students that are involved in booking a consultation with a lecturer. The table stores attributes of objects pertaining to the class “Student”.

Student_No

Description: Unique identifier for each respective student on the university database

Type : Large Number

Format : Primary Key

Note: No non-numeric values as this is the primary key.

CRS_ID

Description: Unique identifier for each respective course on the university database

Type : Large Number

Format : Foreign Key

Note: Foreign Key inherited from Course Table

Student_FName

Description: The first name of the student

Type : Short Text

Format : N/A

Note: First name of the student booking the consultation

Student_LName

Description: The last name of the student

Type : Short Text

Format : N/A

Note: The last name of the student booking the consultation

Student_Degree

Description: The classification name of the degree that the student is registered for.

Type : Short Text

Format : N/A

Note: Degree name

Table : Timeslot

Scope : Data about timeslots that are involved in the consultation booking process. The table stores attributes of objects pertaining to the class “Timeslot”.

Slot_ID

Description: Unique identifier for each respective timeslot

Type : Large Number

Format : Primary Key

Note: No non-numeric values as this is the primary key.

Lect_ID

Description: Unique identifier for each respective lecturer on the university database

Type : Large Number

Format : Foreign Key

Note: Foreign Key inherited from Lecture Table

Slot_Time

Description: The exact time associated with the time slot

Type : Date/Time

Format : hh:mm AM/PM

Note: Date

Slot_Date

Description: The date associated with the time slot

Type : Date/Time

Format : dd/mm/yyyy

Note: Date

Slot_Status

Description: Timeslot status regarding whether it is available for booking or not

Type : Yes/No

Format : N/A

Note: Boolean value checking whether a booking is available (Yes) or if it is unavailable (No).

Table : Administrator

Scope : Data about the administrators that are involved in overseeing the bookings made by students with a lecturer. The table stores attributes of objects pertaining to the class "Administrator".

Admin_ID

Description: Unique identifier for each respective administrator on the university database

Type : Large Number

Format : Primary Key

Note: No non-numeric values as this is the primary key

Admin_FName

Description: The first name of the administrator

Type : Short Text

Format : N/A

Note: First name of the administrator overseeing the booking of the consultations

Admin_LName

Description: The last name of the administrator

Type : Short Text

Format : N/A

Note: The last name of the administrator overseeing the booking of the consultations

Table : Course

Scope : Data about the courses that a student can consult for . The table stores attributes of objects pertaining to the class “Course”.

Crs_ID

Description: Unique identifier for each respective course on the university database

Type : Large Number

Format : Primary Key

Note: No non-Numeric values as this is the primary key

Crs_Name

Description: The name associated with the course

Type : Short Text

Format : N/A

Note: Name of the course that the student is registered for.

Lect_ID

Description: Unique identifier for each respective Lecturer on the university database

Type : Large Number

Format : Foreign Key

Note: Foreign Key inherited from the Lecturer table.

Table : Lecturer

Scope : Data about the lecturers that are to be booked by the students. The table stores attributes of objects pertaining to the class “Lecturer”.

Lect_ID

Description: Unique identifier for each respective lecturer on the university database

Type : Large Number

Format : Primary Key

Note: No non-Numeric values as this is the primary key

Lect_FName

Description: The first name of the lecturer

Type : Short Text

Format : N/A

Note: First name of the lecturer to be booked for consultation by students

Lect_LName

Description: The last name of the lecturer

Type : Short Text

Format : N/A

Note: The last name of the lecturer to be booked for consultation by students

Lect_Office

Description: The office number of the lecturer

Type : Short text

Format : N/A

Note: The office number of the lecturer to be booked by the students

Table : Consultation

Scope : Data about the consultation, its time , date and number. The table stores attributes of objects pertaining to the class “Consultation”.

Cons_ID

Description: Unique identifier for each consultation that takes place

Type : Large Number

Format : Primary Key

Note: No non-Numeric values as this is the primary key

Stu_ID

Description: Unique identifier for each respective student on the university database

Type : Large Number

Format : Foreign Key

Note: Foreign Key inherited from the Student table.

Lect_ID

Description: Unique identifier for each respective lecturer on the university database

Type : Large Number

Format : Primary Key

Note: No non-Numeric values as this is the primary key

Cons_Status

Description: The status of your booking for the consultation.

Type : Short Text

Format : N/A

Note: A text notifying you of your booking's status.

Cons_Date

Description : The date associated with the consultation

Type : Date/Time

Format : dd/mm/yyyy

Note: Date

Slot_ID

Description: Unique identifier for each respective timeslot

Type : Large Number

Format : Foreign Key

Note: Foreign Key inherited from the Timeslot table
